

KM LED Blue Safety Sprayer Warning Light

KM LED Sprayer Blue
Safety Warning Light
PN: 2794

Ideal for various Makes of Sprayer Equipment

Use the LED Blue Safety Warning Light as a replacement light in your Sprayer equipment to shine a bright blue light on your work area so that you can see the spray pattern. Save yourself time and money with an IP68 rated light (no dust will get in your light & your light can be fully and continuously submerged in water). This light has filters that will eliminate unwanted radio and electromagnetic frequencies from external sources. Features die-cast aluminum housing/ heatsink for durability and a long service life. Aluminum housing is specifically designed to dissipate heat away from the internal electronics, which increase light output and improves performance. This light is designed to handle any severe environmental condition.

Die-cast aluminum housing/ heatsink for long-lasting durability with a high quality and long service life

Only 2 lights are needed for 150 ft. boom, more are required if higher density is desired

Polycarbonate lens for added durability

Stainless steel mounting bracket and hardware for long-lasting durability

For the best results, the lights should be mounted on the boom closest to the pivot hinge shining out to the end of the boom so that the light beam follows the boom angle no matter where the boom is set.

Can place the light in front or behind the nozzles. For the best results, place the light behind the nozzles so that the light illuminates the nozzle pattern.

Make mounting brackets as needed.

- **Tiger Lights TLFL5 Light**
- Replaces sprayer boom light
- 4.25" x 4.5" x 3" (W x H x D); 16 LEDs; 3.5 amp draw
- Spot beam pattern; 2,650 effective lumens
- Input voltage: 12-Volt to 24-Volt
- Ideal for AGCO®, Allis Chalmers®, Buhler®/Versatile®, Case IH®, Challenger®, Ford®-New Holland®, John Deere®, Kubota®, Massey Ferguson® and Steiger® Sprayers
