

Instruction steps to install K&M seat on ZD series mower.

PN: 6878 KM PN: 7882 mechanical suspension
PN: 6879 KM PN: 7916 air suspension

PN 6879

1. Tip seat up and unplug 2 wires to OP switch.
2. Remove four 8mm nuts from bottom side of the plate to remove seat.
3. Attach the K&M seat onto Kubota mounting plate with hardware provided in bolt bag.
4. To connect the wiring harness on a the mechanical suspension connect the white wire and yellow wire to the two wires removed from seat in step 1 by adding male spade ends to the wires.

On the air suspension ground the black wire to the mower by adding a round or U type connector to wire and bolting it to mower (the voltage regulator mounting bolts is a good location to attach wire). Connect the power or red wire to the red wire with blue stripe located in the mower wiring harness. (It may be taped to the harness and has a spade end on it.)

5. Lower seat into operating position and test to see if OPS is operating and check air compressor operation on air suspension seats.
