BENEFITS OF KM LED WORK LIGHTS

Why LED Lights?

- **Cheaper to Operate:** Last 5x longer than HID and Halogen lights providing larger savings over time.
- **Safer to Use:** LED lights are more powerful to provide longer distances for driver to see better. The white color and overall coverage can also help reduce operator fatigue.
- **Easier on Equipment:** LED lights use less energy, putting less strain on the equipment electrical system.
- **Easy to Install:** Most LED lights are designed to be a direct replacement (Plug & Play). They come with factory style brackets, connectors and mounting points.

Benefits:

- Connector for Plug and Play Application
- Electromagnetic Interference Filter (EMI)
- IP68 Rating (waterproof & dustproof)
- Die-Cast Aluminum Housing/Heat-Sink
- Exact Fit (no generic lights with will-fit brackets)
- Radio Frequency Interference Filter (RFI)
- Durable Polycarbonate Lens
- Stainless Steel Hardware

KM LED SPRAYER BLUE SAFETY WARNING LIGHT

Better visibility with blue safety light.

Use the LED Blue Safety Warning Light as a replacement light in your Sprayer equipment to shine a bright blue light on your work area so that you can see the spray pattern.

Features a durable polycarbonate lens and is built to be RoHS compliant. The color of light LEDs emit is near the color spectrum of the mid-day sun and allows the human eye to function and view objects better to improve your work environment.

Ideal for AGCO®, Allis Chalmers®, Buhler®/Versatile®, Case IH®, Challenger®, Ford®-New Holland®, John Deere®, Kubota®, Massey Ferguson® and Steiger® Sprayers

Only 2 Lights Needed for 150 ft Boom. More Required if Higher Intensity is Desired. For Best Results, the Lights Should be Mounted on the Boom Closest to the Pivot Hinge Shining Out of the End of the Boom so the Light Beam Follows the Boom Angle No Matter where the Boom is Set. Place the Light in Front or Behind the Nozzles.

For the Best Results Place Behind the Nozzles so that the Light will illuminate the Nozzle Pattern. Make Mounting Brackets as Needed.

TIGER LIGHTS MOJAVE SERIES GUIDE:

The Mojave Series allows you to change up your lens to customize different beam patterns and/or light colors. Remove the lens by removing the bolts around the black bezel (frame around the lens). The lens will then pop right out. A rubber O-ring seals the internal compartment from water and dust. If this is damaged, you can purchase the O-ring separately. Also available are amber lens kits for each light with one replacement O-ring as a backup option. When installing the new lens, make sure the lens sits properly in the alignment groove and is flat against the O-ring. When tightening down the bezel, the best practice is to slowly tighten the bolts across from each other, not in a circle (similar to changing a tire).
